

TECHNO 2018

## CHOOSING HARNESS SIZE

1. Take the measure while seated, placing the measuring tape under your knee and continue to your neck as shown below.
2. Choose your harness size according to the table. If you seem to fit two sizes, add the seatplate width into account as well. If you think wider seat to be more comfortable, stay with bigger size. Remember that smaller sizes have lower suspension height. Difference of this height between sizes is 1 cm.
